

OSTEOPATHY AND OSTEOPATHIC MEDICINE: TOUCHING LIVES AND IMPROVING HEALTH WORLDWIDE

OSTEOPATHY/OSTEOPATHIC MEDICINE:

A patient centered whole body approach to healthcare that recognises the importance of the relationship between the structure of the body and the way it functions.

Osteopathic practitioners use palpation and manual techniques to influence muscles, joints, nerves, connective tissue, circulation and internal organs to support the body's ability of restoring and maintaining health.

OSTEOPATHIC INTERNATIONAL ALLIANCE
